

ABSTRACT OF THE DISCLOSURE

The present invention pertains to a method of storing data displayed on a display and transmitting the data in a mobile terminal. Upon request of capturing
5 of the displayed data from a user, the mobile terminal stores data displayed on the display as display data and determines whether the display data is text data or graphic data. If the display data is text data, the mobile terminal transmits the display data by a predetermined text transmission function. If the display data is graphic data, the mobile terminal transmits the display data by a predetermined
10 graphic transmission function.
